Bridge Design The widely used modular concept of the SOFiSTiK FE software has especially enabled generations of bridge designers to do their challenging job. Ranging from parametric design of frame bridges to force optimization and shop form computations of large span post-tensioned concrete and steel bridges.

Bridge Design | SOFiSTiK AG

Working through the available tutorials the user will learn the general SOFiSTiK Bridge Design Workflow. On different bridge types we show different ways of system generation as well as the design processes for different element types.

Since May 2020 we are happy to present a new workflow, which enables the user to import bridge axis and geometry from SOFiSTiK Bridge + Infrastructure Modler into the SOFiSTiK Structural Desktop (SSD) and SOFiPLUS. We can add additional information to the imported geometry and perform all necessary analysis and design steps.

Organize input data in a spreadsheet and create the bridge superstructure along an axis with a master cross-section, variables, and placements. Define the superstructure as a spine model. Assign construction stage numbers and section Id's to the structural lines. Specify support conditions using placement names or station values.
