A brilliant insightful book that provides a fairly decent introduction to Thermal Physics at the expense of mathematical rigor. The organization of this book feels all over the place with the author connecting topics from all around in what seems to be a constraint originating from the average organization.

$V(2) = m kT$ (3) where m is the average mass of an air molecule, N is the number of molecules in volume V and T is the temperature. We therefore get a differential equation for the pressure: $dP/dz = -\rho g$ (4) $= -mg/kT$ (5) This is called the barometric equation. In a realistic model, both g and
