Introduction to eukaryotic cellular architecture. Eukaryotic cells contain a number of specialized subsystems, or organelles, that cooperate to allow the cell to function. Here is a partial list of these subsystems. Walls (the membranes). These barriers are primarily made up of lipids in a bilayer arrangement, augmented by specialized proteins.

Introductory Biomechanics - From Cells to Organisms - Knovel

Comparative biomechanics is the application of biomechanics to non-human organisms, whether used to gain greater insights into humans (as in physical anthropology) or into the functions, ecology and adaptations of the organisms themselves. Common areas of investigation are Animal locomotion and feeding, as these have strong connections to the organism's fitness and impose high mechanical demands.
