The analysis of survival experiments is complicated by issues of censoring, where an individual's life length is known to occur only in a certain period of time, and by truncation, where individuals enter the study only if they survive a sufficient length of time or individuals are included in the study only if the event has occurred by a ...

STAT 5454 Survival Analysis Fall 2010 [KM] Exercises 4.4 (a) See R code for numerical results. The percutaneous placement is better. (b) We know $d_i = Y_i$ provides a crude estimate of $h(t_i)$. Here, for the surgical group, $h(4:5) = 2=32$ and $h(5:5) = 1=33$, so a crude estimate of $h(5)$ can be $(2=32 + 1=33)=2$. Similarly, for the percutaneous group, $h(3:5) = 1=49$ and $h(6:5) = 1=45$, so a

Survival Analysis by John P. Klein and Melvin L ...

Survival analysis is a branch of statistics for analyzing the expected duration of time until one or more events happen, such as death in biological organisms and failure in mechanical systems. This topic is called reliability theory or reliability analysis in engineering, duration analysis or duration modelling in economics, and event history analysis in sociology.

Survival analysis - Wikipedia

Technical details of the derivation of the techniques are sketched in a series of Technical Notes. This book will be useful for investigators who need to analyze censored or truncated life time data, and as a textbook for a graduate course in survival analysis. The prerequisite is a standard course in statistical methodology.
