The Fermi paradox is a conflict between the argument that scale and probability seem to favor intelligent life being common in the universe, and the total lack of evidence of intelligent life having ever arisen anywhere other than on the Earth.. The first aspect of the Fermi paradox is a function of the scale or the large numbers involved: there are an estimated 200–400 billion stars in the ...

For example, the luminiferous aether wasn't debunked; it was not needed in the new theories, and so it dropped out of physics, but that's a very different matter. Locke's objection to innate ideas, principles, knowledge, etc., not only wasn't a scientific theory, but isn't touched by genetic theory, or by any scientific theory.

Proponents of labeling theory support the theory's emphasis on the role that the attitudes and reactions of others, not deviant acts per se, have on the development of deviance. Critics of labeling theory indicate that the theory only applies to a small number of deviants, because such people are actually caught and labeled as deviants.

A scientific theory that cannot be evaluated empirically is not a good theory. By definition, a scientific theory is a natural, testable ("falsifiable") explanation of a large body of facts or observations. If a theory cannot be tested, then it cannot be falsified, even if it is indeed false. This isn't just an arbitrary restriction.

Why a theory that cannot be evaluated empirically is not a ...

Theory is constructed of a set of sentences that are entirely true statements about the subject under consideration. However, the truth of any one of these statements is always relative to the whole theory. Therefore, the same statement may be true with respect to one theory, and not true with respect to another.

1. Big Freeze. Big Freeze is the theory of the final state that our universe is heading toward. The universe has a limited supply of energy. According to this theory, when that energy finally runs out, the universe will devolve into a frozen state. The thermal energy produced by the motion of the particles will gradually wear out, which means that eventually, this particle motion will slow down ...
